 0000-0001-5072-6801

## Research Interest

- Solar cell and battery simulations from first-principles
- Carrier lifetime and non-radiative carrier recombination via the Shockley-Read-Hall process
- First-principles calculation and tight-binding modelling of nanostructures and defects in semiconductors
- Materials design thorough computational search

## Education

- **Ph.D. in Physics:** KAIST, Republic of Korea, 2016  
(*Dissertation: Theoretical study on doping efficiency in silicon nanowires* supervised by [Prof. K. J. Chang](#))
- **B.S. in Physics:** KAIST, Republic of Korea, 2010

## Academic Research Experience

- **Postdoctoral Research Associate**, Department of Materials, Imperial College London, 2017 - Present (PI [Prof. Aron Walsh](#))
- **Postdoctoral Research Associate**, Department of Physics, KAIST, 2016 - 2017 (PI [Prof. K. J. Chang](#))
- **Undergraduate internship**, Department of Physics, University of Cambridge, 2006 (Advised by [Dr. Pietro Cicuta](#))

## Technical Skill

- First-principles calculations within the Density Functional Theory (DFT) framework and tight-binding modeling
- Experience in molecular dynamics simulations and finite-difference modeling
- Experience in VASP, QE, Wannier90, LAMMPS, GULP, Phonopy, etc.
- **Programing:** Python, Julia, C/C++, FORTRAN

## Extracurricular Activities

- United Nations peacekeeping mission ([UNIFIL](#))
- Swimming

## Publications

1. Kazuki Morita, Ji-Sang Park, **Sunghyun Kim**, Kenji Yasuoka, Aron Walsh, **Crystal Engineering of  $\text{Bi}_2\text{WO}_6$  to Polar Aurivillius-Phase Oxyhalides**, *J. Phys. Chem. C*, (In press)
